

CAMBRIDGE RESEARCH SYSTEMS

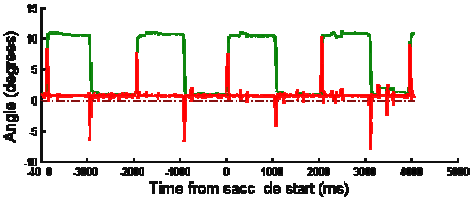

# 250Hz VET

# High-Speed Video Eyetracker Toolbox

The new High-Speed Video Eyetracker Toolbox offers unique value for high performance video eye tracking. Based upon our acclaimed eye tracking engine, the HS-VET is an oculomotor research tool which is both simple to use and makes accurate, low noise, drift free measurements. Accuracy and repeatability is better than 0.25° at 250Hz.

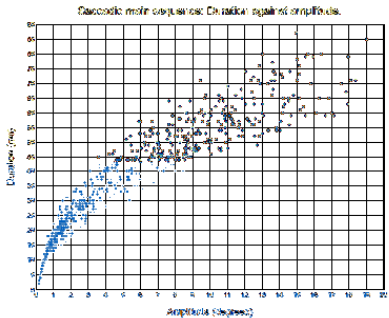

The HS-VET provides simple to use software tools to integrate eye movement recording into laboratory software systems using less than a dozen lines of program code. The system incorporates unique hardware features for interfacing the HS-VET to other equipment in real time.

The videoEyetrace application supplied with the system incorporates eye movement recording and visual stimuli presentation for common eye movement research applications.

## Systems start from only £9995
